

C

Correct polarity, wrong sentiment intensity

Under-specified target wording compresses a strongly negative opinion into a mild negative class.

LOCAL DISCOURSE CONTEXT

Turn -2 "I had waited months for this sequel."

Turn -1 "The story made no sense. The acting was painful.
The ending ruined the entire series."

Target "I did not really enjoy it."

Audio  restrained prosody

Visual  subtle facial evidence

Illustrative MOSI-style example (not a verbatim dataset sample)

Surface wording
"did not really enjoy"
→ mild negative

Contextual intensity omitted
months of anticipation
+ multiple severe failures

Polarity is negative,
but its severity
remains implicit

INTENSITY ERROR

Prediction

**Mild negative
(-1)**

Reference

**Strong negative
(-3)**

Polarity is preserved; only the ordinal level is underestimated.
